

TASK 5 :

Implement a Custom Repository Method

Task: Create a custom query method in a Spring Data JPA repository.

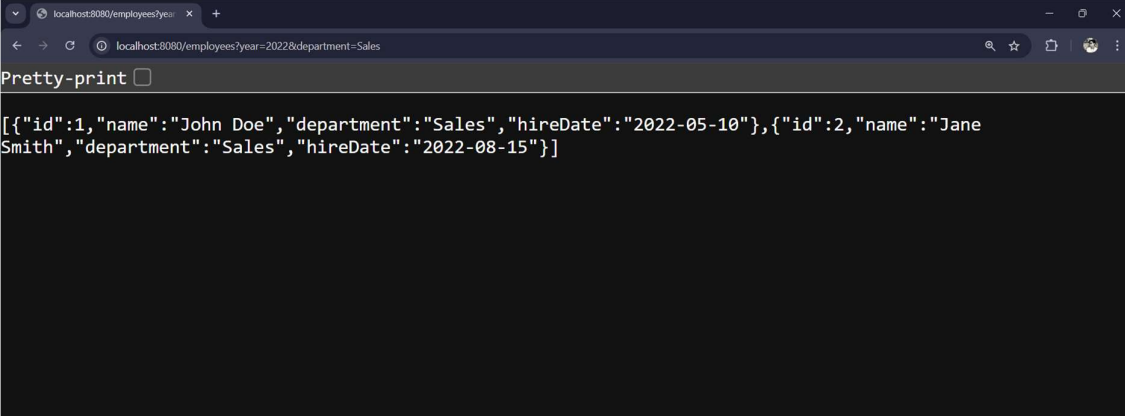

Details:

- Entity: Assume you have an Employee entity with fields like id, name, department, and hireDate.
- Repository: Extend JpaRepository or CrudRepository to create a repository interface for the Employee entity.
- Custom Query: Implement a method to find employees who were hired in a specific year and belong to a particular department

The source code is uploaded in the folder, "employee-management(1)".

Output:

Link: <http://localhost:8080/employees?year=2022&department=Sales>

```
Pretty-print ☐
[{"id":1,"name":"John Doe","department":"Sales","hireDate":"2022-05-10"}, {"id":2,"name":"Jane Smith","department":"Sales","hireDate":"2022-08-15"}]
```
